### **New Wapalta 4.95: faster, more reliable, more interesting!**

In early 2010 the company Generatum Software has released a new version of Wapalta application for mobile phones with Java platform support.

New Wapalta 4.95 continues the vector of development being the basis of the previous successful versions of application. Yet it is a big step forward, as in this version two problems have been successfully solved at once by the developers.

On the one hand, this version contains a number of new features, such as: instantaneous sending photos from one's phone camera, built-in graphics editor, advanced messaging, online games, sports highlights channel, increasing the number of supported social networks, etc.

On the other hand, the new Wapalta 4.95 works almost twice as fast and has even wider compatibility with different phones, compared with the previous version of the application.

Thanks to the successful combination of functionality, rich content and a modern graphical user interface, as well as to the great number of supported mobile phones, the new version Wapalta 4.95 has earned the recognition of users, whose number increased from 500 thousand to 700 thousand people and continues to grow steadily.

### **Wapalta Application**

Information and entertainment service Wapalta has been developed since April 2007. In the application, a user is offered more than 50 different information and entertainment channels, enabling work with the mobile Internet fast, convenient and with a low cost traffic. Wapalta is a multiple winner of Russian and international competitions of innovative projects in IT. Trademarks "Wapalta" and "Pocket Web" are owned by Generatum Software. In August 2009, under the version of the journal CHIP, Wapalta was among the ten best mobile services in Russia. Official site of application Wapalta: <http://wapalta.com>
